TIME TO CONVERT YOUR CLAIMS TO HIPAA ANSI 837 V5010

If you are sending your claims in a print image, National Standard Format (NSF) or other proprietary format, then your vendor is converting your file to an ANSI 837 format so that your submission is HIPAA compliant. Your vendor takes each piece of data from your file and provides the correct mapping to the ANSI 837 program. Any time you add a new field to your file, that piece of data must also be mapped.

MEDITECH's ANSI 837 Institutional and Professional claim programs are developed to pull the data elements from MEDITECH without intervention from an outside party.

WHAT ARE YOU WAITING FOR?

Many hospitals and physician office practices have already converted to HIPAA ANSI 837I and 837P claim forms. If you are waiting because you just don't know where to start, CPeople can help! CPeople will set up and test your

ANSI 837 claim. In addition, hands on training will be provided to give you the knowledge to maintain your claims after they are in production.

Once you have made this important transition, your claim file will be a standard HIPAA compliant file. If you wish to change vendors the same file format can be sent to any outside entity and the end results will always be the same.

ADVANTAGES TO CONVERTING TO ANSI 837:

- You have control and knowledge of your claims
- Cost savings for custom claim edits
- Faster resolution of claim issues
- No vendor manipulation of your claim file
- Standardization of EDI transactions

CPEOPLE consultants have more than 25 years of experience in electronic data interchange (EDI) and electronic remittance advice (ERA) working directly with outside billing vendors and with MEDITECH. We can help!
