HAVE YOU TAKEN A HARD LOOK AT YOUR CLAIMS PROCESSING LATELY?

YOUR CLAIM FORMS ARE YOUR MOST VALUABLE TOOL when it comes to collecting reimbursement from the insurance payers.

But how efficient are your claim forms?

Are your billers spending too much time correcting errors in your outside billing software?

BRING YOUR EDITS BACK TO MEDITECH!

If you are using a billing vendor, such as SSI, ePremis, Nebo, etc, to process your claims, you probably have custom edits that reject claims for missing or invalid data elements. Over time, you may have lost track of just what custom edits you have in your billing software.

Did you know you have the ability to build custom edits in MEDITECH using a number of routines including Claim Checks and Claim Maps? Edits can be simple (rejecting a claim that is missing a discharge status) or they can be very complex (rejecting a claim that has a specified CPT4 code with units that are greater than a certain number).

ADVANTAGES TO HAVING EDITS IN MEDITECH:

- The data in MEDITECH will match the data that the payer receives
- You have more control over your edits
- You can send the same file to any outside vendor
- It will allow your billers to use MEDITECH's Queue and Process Claims routines
- You no longer have to pay the vendor to build your payer edits

CPEOPLE consultants have more than 15 years of experience working together with customers to build their payer edits in MEDITECH.

A hands on training session with billers to bring them up to speed on Queuing and Processing claims will enable them to work their claims quickly and effectively.

In addition, CPEOPLE will review with you MEDITECH's canned reports that are available to help keep you on top of your claims processing.
